Learn To Thrive (LTT) is an online learning platform started by two students of IIT Kharagpur. Now we are having a team of more than 6 IITians from different IITs who are experts in their work. We conduct online workshops on C++ (From Basic to Advanced), Data Structure & Algorithm (DSA - for beginners), Interview preparation to crack the Coding round (Based on DSA question practice). Our team is also working on launching python, Machine Learning and Data Science Workshops. Our aim is to maintain continuity among college students who are passionate and ambitious about learning.

- ❖ Workshops are completely designed to focus on quality contained, proper mentorship & guidance to each student that is why we are always having a limited number of seats.
